Navigating your
sea of data is a
whale of a problem.

Good thing
we're in this together.

DURASPACE™

OPEN TECHNOLOGIES FOR DURABLE DIGITAL CONTENT

“Data management represents one of the most important challenges for higher education. Libraries have an important, perhaps even unique, opportunity to provide solutions using DuraSpace’s technology and community efforts.”

—Sayeed Choudhury
Associate Dean for Library Digital Programs
Hodson Director of the Digital Research
and Curation Center
The Sheridan Libraries
The Johns Hopkins University

The challenge:

The challenge of saving large files and data continues to grow. The data is bigger, the costs are greater, and the stakes remain high. How can your organization meet the data management needs of researchers, scholars and funders with the same resources you’ve always had? DuraSpace offers the tools you need now, and in the future.

The solution:

As a 501(c)3 non-profit devoted to the interests of our DSpace and Fedora user communities around the world. We provide solutions that can be put in place today to address your most immediate preservation needs. Our newest service, DuraCloud, is a hosted service for managing your content in the cloud. DuraCloud is the only service that makes it easy to move copies of your content into the cloud and store them in different places.

“DuraSpace offers immediate solutions for university libraries grappling with growing amounts of digital content and data. By supporting their work, we are not only investing in the future of our own digital repositories, but in the integrity of the larger scholarly record as well.”

—Ann J. Wolpert
Director of Libraries
Massachusetts Institute of Technology

By bringing together like-minded organizations that are focused on finding answers, we continue to work collaboratively to test and share new, innovative technologies. We’re providing the expertise and the support you need at this moment, and working to meet the next challenge.

The goal:

Our common goal is to ensure that our scholarly record is saved and accessible for future generations. No matter how vast your sea of data, we’re committed to working with you. By supporting DuraSpace you’ll benefit from, and contribute to, the knowledge and solutions we discover as we work toward this goal. Together we can realize the full potential of our vision. Join us in this critical mission by becoming a sponsor.

Our open technologies:

DSpace is a turnkey institutional repository application.

Fedora is a framework for building digital repositories.

DuraCloud is a hosted service for managing your content in the cloud.
